Agromet Advisory

General Advisory
1. On farm water harvesting structures (farm pond) should be made to harvest rain water for providing protective irrigation.
2. Hoeing and weeding should be done during kharif season to improve the water conservation and keep the field clean.
3. Conserve moisture by mulching in the vegetable crops.
4. Before transplanting rice, dip the root of the seedlings in Chloropyrophos solution for 6-8 hours (10ml chloropyrophos in 10lt water).
5. Sow non paddy crops like ragi, maize, arhar, greengram, blackgram, cowpea, guar, sesame, groundnut, castor and tuber crops.
6. Niger varieties like Deomali, Alasi-1, Utkal Niger 150 can be sown in the month of August. Grow vegetables like tomato, brinjal, okra, runner beans etc.
7. Strengthen the field bunds and close the holes to check the seepage losses.
8. Fall Army Worm pest is seen in maize. To control it spray either Spinosad 45SC @ 3ml/l or Chlorantraniliprole 18.5 SC @ 0.4ml/l. Seeds should be treated with Cyantraniliprole 19.8% + Thiomethoxam 19.8% @ 4 ml per kg seed before sowing. Install 5 pheromone traps / acre to monitor pest arrival. Egg parasitoids such as Trichogramma sps. can be released for destroying the egg stage of fall army worm.
10. In case of Fruit and Shoot borer in brinjal, go for application of 60ml Coragen 20 SC in 200 ltr water/acre.

11. In case of red hairy caterpillar in pulses, go for application of 10kg chloropyriphos dust per acre.

12. Go for hoeing and weeding in groundnut.
   Go for planting of marigold with varieties like Giant Ball, African Yellow, Early orange etc.
